

# Medical Grade Transformers

**MPS** offers a full line of custom and standard Medical Grade Transformers of different configurations.

These transformers are carefully made to meet stringent medical safety regulations and conforms to **UL544** and the latest **IEC60601-1/ EN60601-1**.

**MPS** has been in the medical transformer manufacturing business for more than five years and has consistently won the hearts of medical instrumentation companies worldwide due to its continued quality advancements.

Current applications include medical instrumentation from Defibrillators to Patient Monitors.

**MPS** can design from customer specifications as well as work closely with Engineers to develop a viable and cost effective solution.

Quality at **MPS** has always been a number one concern, especially when it comes to medical instrumentations that need to provide a high level of safety for the operator and the patient. Our manufacturing facilities are ISO9001 certified.

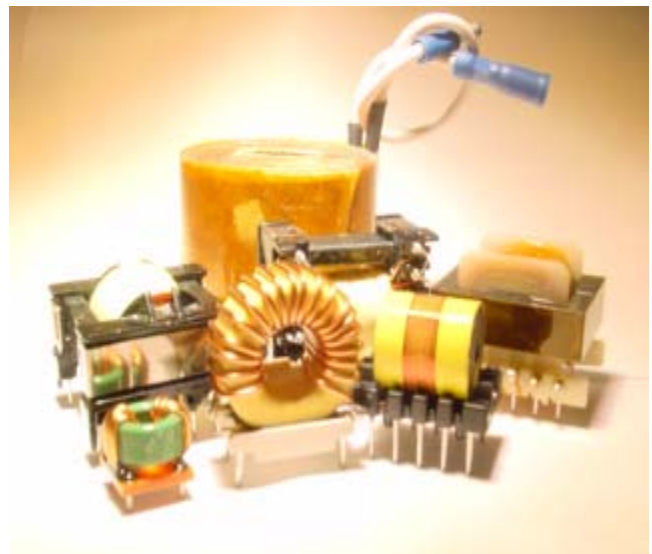

Current capabilities include but are not restricted to the following medical grade transformers:

- Power Transformer
- High Voltage Flyback Transformers
- Common Mode Chokes, Inductors
- Configurations that include toroids, EE, EC, ETD's, RM, Planar and other non standard configurations.

Quantities can range from the low 100 pcs to the high 1,000,000 pcs.

Trust in **MPS** to deliver you the highest quality and cost effective solutions for all your Medical Grade Transformer needs.

Call **MPS** or your local **MPS** Sales Representative for more information on how we can help you on your designs and manufacturing needs.
